

Inheritance – Lab

You are a programmer in the IT department of an important law firm. Your job is to create a program that will report gross salary amounts and other compensation.

There are three types of employees in your firm:

- Programmers
- Lawyers
- Accountants

Your computer-based solution will use inheritance to reflect the ‘general-to-specific’ nature of your employee hierarchy.

Common attributes for all employees are:

- Name
- Salary

Attributes for specific employee types are:

- Lawyers:
 Stock options earned (type int)
- Accountants
 Parking allowance amount (type double)
- Programmers:
 Bus pass (type boolean)

The three specific classes of employees should extend the abstract Employee class (nobody is a generic employee) and implement their own reportSalary() method.

The pay schedule is:

- Employees earn the base salary of \$40K per year
- Accountants earn the base employee salary per year
- Programmers earn the base employee salary plus \$20K per year
- Lawyers earn the base employee salary plus \$30K per year

Requirements:

- Each subclass of Employee must implement its own reportSalary() method. The specific implementations of reportSalary() are limited to a printed line:

```
System.out.println("I am a lawyer. I get " + getSalary() + ", and I have " +  
getOptions() + " shares of stock.");
```

```
System.out.println("I am an accountant. I make " + getSalary() + " plus a parking allowance of " + getParking());
```

```
System.out.println("I am a programmer. I make " + getSalary() + " and I" + ((getBusPass())?" get a bus pass.":" do not get a bus pass."));
```

- Salaries for specific types of employees are in addition to the base employee salary. Raising the base employee salary should automatically raise salaries for all types of employees (hmmm...).
- An object of the 'Employee' class cannot be instantiated because it would be too general.
- Attribute(s) that belong to a super or sub class should be initialized in the corresponding class constructor.

Task 1:

Setup a class hierarchy to accurately reflect the relationships in your law firm.

Task 2:

Create a driver program that will create employee objects and report salaries for your company's employee base:

Programmers:	(your name goes here)	-	No bus pass
	Will E. Makit	-	Bus pass
Lawyers:	Ivana Killmen	-	11 shares signing bonus
	Luke N. Dimm	-	0 shares signing bonus
	Eileen Dover	-	100 shares signing bonus
Accountants:	Bill Cheatem	-	Parking allowance – \$ 17.00
	Joe Kisonyou	-	Parking allowance – \$ 45.50
	Seymore Butts	-	Parking allowance – \$ 2.50

Print your code listing and submit on paper, in class. See Canvas for due date.
